

Welcome to the Inbox Rescue DKIM Guide!

This document doesn't go into detail about what DKIM, DMARC and SPF are. There are many resources for that.

What you'll find here are practical screenshots and instructions here that show you how to find the required records from your email provider to place into your DNS host.

In some cases, especially if you do not have your own domain, an email provider does not require any DKIM updates.

Email providers are listed first, followed by hosting platforms

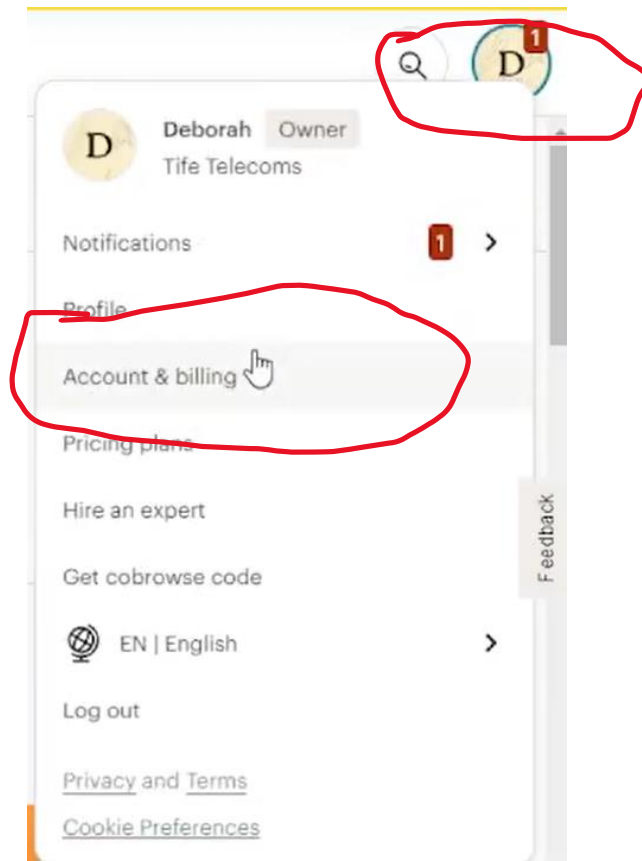

If your platform wasn't listed, please email me at techguru@arshagarwal.com and I'll look into adding it in.

If you have any questions, please email techguru@arshagarwal.com

MailChimp

If you are not using a private domain, MailChimp does not require DKIM for email deliverability.

If you want to send emails from MailChimp using a private domain, you'll need to follow the steps below to ensure deliverability.

Custom Email Domains

 wiyre.com

Authentication in progress

Restart Authentication

✓ 1. Start your email authentication process.

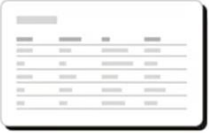

➔ 2. Go to your domain provider's website.

Open a new tab or window and navigate to your domain provider's website to access your domain records.

- Find the page or area that has your domain or domain records. Things to search for are **manage domains**, **DNS**, **custom records**, or **zone files**.
- Your domains are usually in a list form. If you can't find the right page, try searching for your domain provider's help center for **DNS** or **CNAME**.

Awesome, you're ready for the next step.

Next

You are going to add 2 CNAME records to your domain. These records are managed on your domain provider's website or interface. They help Mailchimp direct your email to the right place.

- Look for a place to **create** or **add** a new record.
- For the record **Type**, choose **CNAME**.
- Copy the **Name** info from CNAME 1 below and paste it into your record's Name or Host field. This field may also be called **Hostname** or **Host record**.
- Copy the **Value** info from CNAME 1 below and paste it into your record's Value field. This field may also be called **Data** or **Points To**.
- If you have an option for **TTL**, either leave it at the default setting or choose the lowest value offered.
- **Add** or **save** your record.

Now repeat those steps, but this time copy/paste the info for **CNAME 2**.

CNAME 1	CNAME 2
Name ⓘ k2_domainkey.wiyre.com Copy	Name ⓘ k3_domainkey.wiyre.com Copy
Value dkim2.mcsv.net Copy	Value dkim3.mcsv.net Copy

You can also create a DMARC record if you would like

7. Follow the instructions for creating a new DMARC record. Your DMARC reports will be sent to your email address. We recommend you use a third party, or a dedicated email, to receive your DMARC reports.

TXT

Host

Copy

Points To

Copy

To send your DMARC report to a different email, include `rua=mailto:xxxxx` in the TXT Value, and add your email address.

```
v=DMARC1; p=none; rua=mailto:youremailtoreceiveireports
```

ConvertKit

Navigate to Settings -> Email -> Show DNS Records

Copy these DNS records to your domain provider.

The screenshot shows the ConvertKit dashboard. On the left is a sidebar with a 'Settings' section containing links for General, Email (highlighted with a red circle), Domains, Commerce, Billing, Team, and Advanced. The main content area is titled 'Verified Sending Domains' and lists two domains: 'sheknowsseo.co' and 'ottawathingstodo.com'. The 'sheknowsseo.co' domain shows a 'Show DNS records' button. The 'ottawathingstodo.com' domain shows a warning message: 'Some records do not match your DNS settings' and provides instructions on how to fix them. Below the warning is a table of DNS records for 'ottawathingstodo.com'.

TYPE	NAME	VALUE
CNAME	ckespa	spf.dm-nd5zo06d.sg2.convertkit.com.
CNAME	cka_domainkey	dkim.dm-nd5zo06d.sg2.convertkit.com.
TXT	_dmarc	v=DMARC1; p=none;

At the bottom of the table is a 'Remove this domain' button.

Kajabi

Kajabi does not require DKIM for email deliverability.

Ontraport

Ontraport does not require DKIM for email deliverability.

If you have your own domain you would like to send from, you will need to follow these steps:

Log into the DNS manager of your domain registrar and add the following records:

1. Record 1: DKIM
 1. Type: TXT
 2. Name: ontramail._domainkey
 3. Value: “v=DKIM1;k=rsa;
p=MIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQKBgQDiHV+GFJUPAtmIh26KHbn5
PZXEFm3XK2XjEs4HFOSDZthULWyGvI5CqfYmNm7LFTWC3v5m6CtbLeNgDu0RwT
w+94TSryL4ZYC6PESaJCHurmpREZTh+UFILliRip3reqrNfoYpkiWa6fgu9vbyZob+W3d
+leBP/p0mmOXeJiOjKwIDAQAB;”
2. Record 2: SPF
 1. Type: TXT
 2. Name: Blank or @ (the root domain)
 3. Value: “v=spf1 include:_spf-moon-ray.ontramail.com include:_spf-ontramail.ontramail.com ~all”
 4. If you are sending email from other services using this domain, you will need to add the mailing IPs of those other services in your SPF record as well. These can be added as new “ip4:” items in the value. In addition, add any other mailing domains that your mail might come from in an “include:example.com” item.

Contact support@ontraport.com to finalize the changes to your SPF/DKIM records.

Thinkific

Thinkific does not require DKIM for email deliverability. By default, emails send from the Thinkific servers.

If you are on an Expand or Plus plan and you have your own domain you would like to send from, you will need to reach out to Support as detailed in the article below:

<https://support.thinkific.com/hc/en-us/articles/360034134034-Email-White-Labelling>

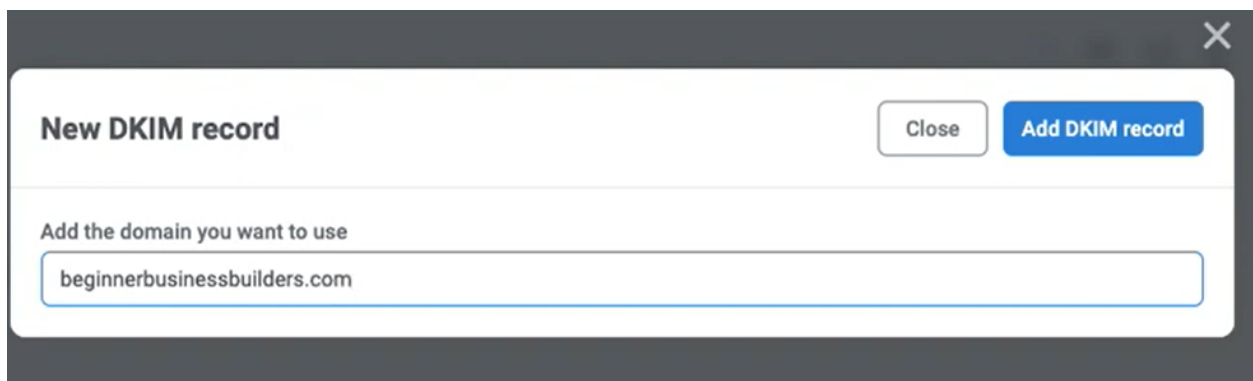

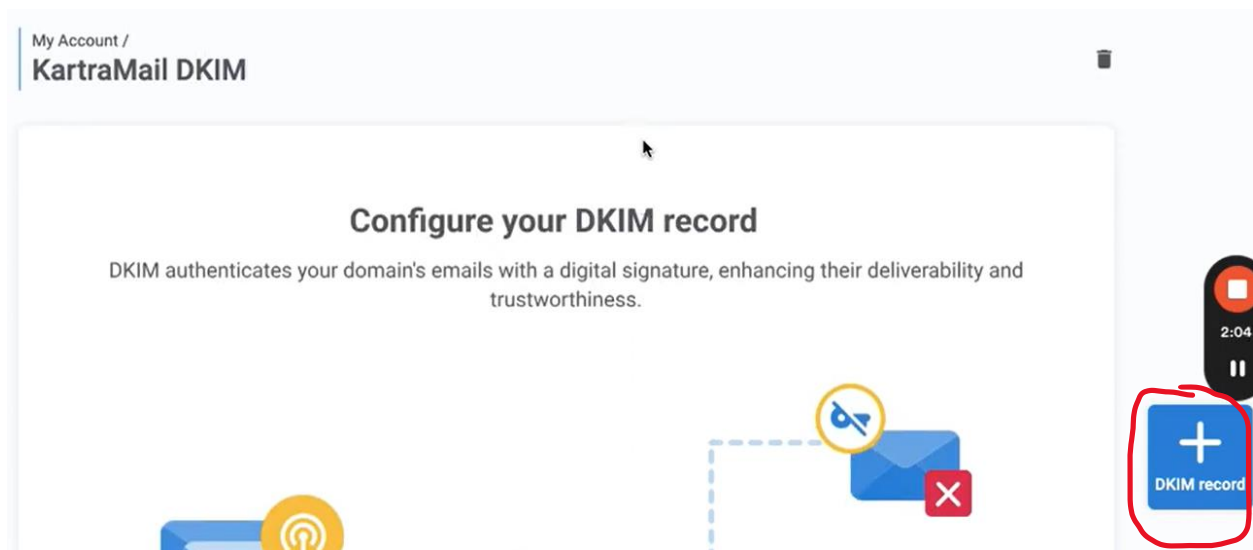

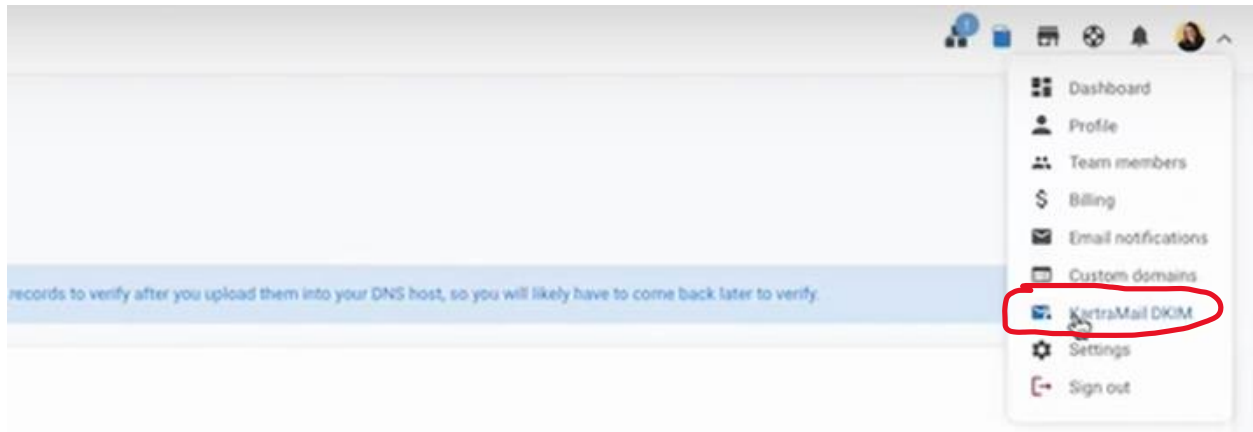

LeadConnector

LeadConnector does not require DKIM for email deliverability.

If you'd like to set up your domain with LeadConnector so that it sends from your domain, follow these instructions:

<https://help.leadconnectorhq.com/support/solutions/articles/48001226590-how-to-set-up-a-dedicated-sending-domain-within-a-sub-account>

Kartra

Enter these details at your Domain host:

Read the detailed [DKIM documentation](#) for more information about authenticating email sender domains.

1. Log in to your DNS provider:

Access the website of your DNS provider (where your domain is registered or hosted) and log in with your credentials.

2. Navigate to the DNS management section:

Find the DNS settings or DNS management area. This is often in the 'Domain Management' or 'Settings' section.

3. Adding CNAME records:

Look for an option to add a new record. This is typically labeled as 'Add Record', 'Create Record', or something similar.

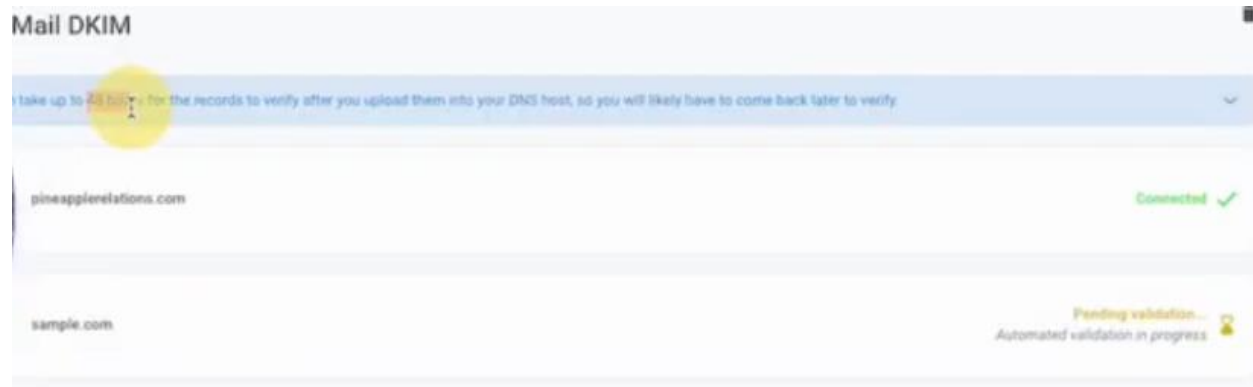

- You need to add three CNAME records. For each record: Select 'CNAME' as the type of record.
- Enter the Host Name provided by Kartra.
- Enter the Points To field with the specific value provided by Kartra.

Type	Host	Points to	
CNAME	sk311028.beginnerbusinessbuild...	u41154002.wl003.sendgrid.net	
Type	Host	Points to	
CNAME	k01._domainkey.beginnerbusines...	k01.domainkey.u41154002.wl003.sendgrid.net	
Type	Host	Points to	
CNAME	k012._domainkey.beginnerbusine...	k012.domainkey.u41154002.wl003.sendgrid.net	

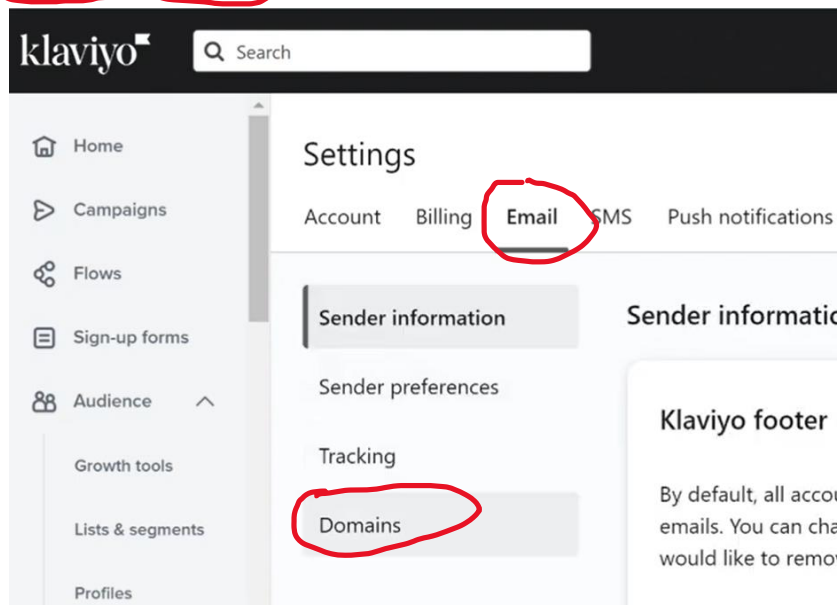

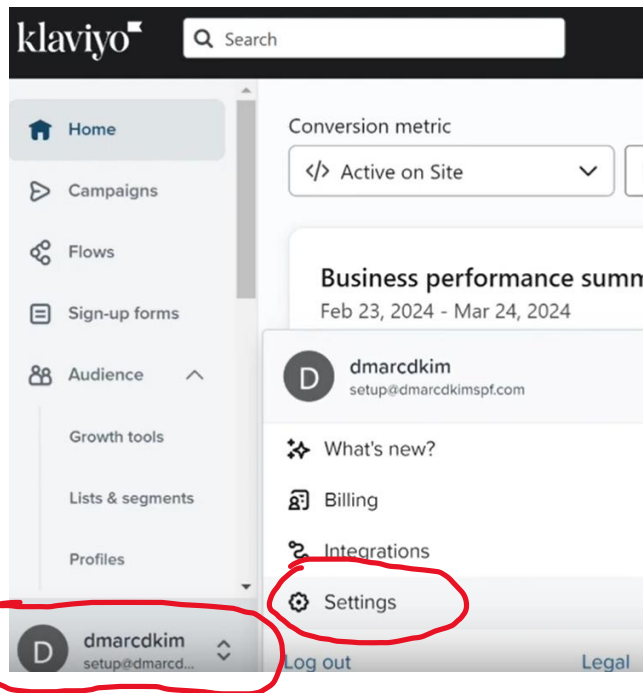

4. Save your changes:

After entering all three CNAME records, save your changes. This is usually done by clicking a 'Save', 'Update', or 'Confirm' button.

Once you save changes, this will take up to 48 hours to validate!

Domain verification

DKIM, SPF, and DMARC records help email providers recognize and trust your emails, increasing your deliverability and reducing the risk of going to spam.

Domain verification

DKIM, SPF, and DMARC records help email providers recognize and trust your emails, increasing your deliverability and reducing the risk of going to spam.

Verify your domain

We've detected that your domain provider is **GoDaddy**.

Open a new browser tab and log in to your domain provider to add DKIM, SPF, and DMARC records.

Copy your DNS records into GoDaddy

In your GoDaddy DNS Records Manager, create the following records and paste in the values below:

TYPE	HOST	POINTS TO
DKIM		
CNAME	fde._domainkey.r	dkim.y50al9.fh40.ft
SPF		
CNAME	fdesp.rosannacla	spf.y50al9.fh40.fds
DMARC		
TXT	_dmarc.rosannac	v=DMARC1; p=non

ActiveCampaign

By default, emails send from the ActiveCampaign servers, so ActiveCampaign does not require DKIM for email deliverability.

However, if you select to manage your own email authentication, you will need to copy the following values:

Choose to manage your own email authentication

Advanced Settings Save Settings

Email Deliverability

Authentication

By default we will manage DKIM authentication for you. You can choose to manage your own DKIM authentication to establish your domain reputation and improve deliverability.

☒ ActiveCampaign manages deliverability and authentication for me.
ActiveCampaign will manage DKIM authentication for you, meaning contacts may see a "via" header in their email client indicating ActiveCampaign authenticated this message on behalf of your domain.

☐ I will manage my own email authentication.
Enabling this will remove the "via" header that occurs in some email clients when we manage your authentication. You will need to update the DNS records of any domain name that you use as a "from" email address.

☐ Let me manage my own email authentication and set a custom mail server domain.
You will need to [upgrade to an enterprise plan](#) in order to set a custom mail server domain. This ensures all traces of the email can point back to a domain of your choice and can improve deliverability.

Need help? [Check out our help doc](#)

DKIM values (you'll copy these to your domain host)

DKIM (DomainKeys Identified Mail)

i The domains you enter will not save on this page. Once you choose "I will manage my own email authentication" all verified domains will sign with DKIM. Use this tool to check that all your domains have the proper DNS.

Domain (example.com) Check DNS

Please setup two DNS CNAME records in your DNS provider with the following values:

Name	Value
CNAME 1: acdkim1_domainkey Copy to clipboard	dkim.acdkim1.acems1.com Copy to clipboard
CNAME 2: acdkim2_domainkey Copy to clipboard	dkim.acdkim2.acems1.com Copy to clipboard

Need help? [More information on DKIM authentication](#)

SPF value: Enter your Domain name to generate the record. Then you'll copy this to your domain host.

SPF (Sender Policy Framework)

We manage SPF for you by default so that we can process bounces. SPF will pass on all messages sent from ActiveCampaign. You do not need to setup SPF, but if you would like to add an SPF record to your From Address Domain you can do so here.

Enter your domain name to generate your DNS record

Generate

DMARC: https://help.activecampaign.com/hc/en-us/articles/206903370-SPF-DKIM-and-DMARC-Authentication?_r=SVL1818Z#h_01HD4Q3J37AR77SJNS5QRM7H67

Copy this string, replacing [youremail@example.com](#), to your Domain host as a TXT record.

To get started with DMARC, we recommend you begin with a policy of "None" so that you don't impact your deliverability in case of a misconfiguration. You can then monitor your DMARC reports to see what the impact would be if you use a stricter policy.

We have a recommended initial DMARC policy below. You can set it up by creating a TXT record with a Host or Name of `_dmarc` at your DNS provider and entering the value below for the Value or Record. Please be sure to replace the email address below with your email address:

```
v=DMARC1; p=none; pct=100; rua=mailto:youremail@example.com
```

Squarespace

If your domain is hosted on Squarespace AND you use Squarespace as your email provider, you may not need to take more action

If your domain is hosted on Squarespace AND you DO NOT use Squarespace as your email provider, you will likely need to add CNAME and/or TXT records to your Squarespace from your email provider.

The screenshot displays the Squarespace Domains management interface. On the left is a 'Settings' sidebar with various options. The main content area is titled 'Domains' and includes instructions on how to buy, connect, and manage domains. Below this are buttons for 'GET A DOMAIN' and 'USE A DOMAIN I OWN'. A section titled 'DOMAINS MANAGED BY SQUARESPACE' lists the domain 'ozi9.com', showing its renewal date and price, and its status as 'Primary'. A 'BUILT-IN DOMAIN' section shows a subdomain 'daisy-vibraphone-rp4e.squarespace.com'. On the right, a detailed view for 'www.ozi9.com' is shown, including 'REGISTRATION INFORMATION' and a 'DNS SETTINGS' section (circled in red) with the option to 'Add DNS records and custom records'. Below this are 'ADVANCED SETTINGS' and a 'SEND TRANSFER AUTHENTICATION CODE' button.

Manage Advanced DNS Records

Advanced DNS allows you to manage your DNS records (A, MX, CNAME, TXT and SRV Records) for individual services, such as changing IP addresses, or modifying an email delivery address. [Learn more about DNS Records](#)

NOTE: It may take up to 24 to 48 hours for DNS changes to fully take effect.

[mysuperbbdomain.com](#)

+ ADD RECORD

A

Address records direct domains or subdomains to an IP address, e.g. pointing "store.website.com" to your store location.

TTL
2 Hours

NOTE: It may take up to 24 to 48 hours for DNS changes to fully take effect.

CANCEL ADD

I would recommend making TTL 1/2 hour until you're confident this works, at which point I would switch this to 2 hours or even longer.

Siteground

Use the Create New Record section in the DNS Zone Editor to add DKIM, SPF and DMARK records.

The screenshot shows the SiteGround dashboard with the 'DNS Zone Editor' option highlighted in the left sidebar. The main content area displays the 'Create New Record' section for the domain 'tutorials4wp.com'. The 'A' record type is selected, and the 'Select Name' dropdown is set to 'tutorials4wp.com'. The 'IPv4 Address' field is empty. Below this, the 'Manage DNS Records' section shows a table with two existing A records: 'www.tutorials4wp.com.' and 'mail.tutorials4wp.com.'.

Type	Name
A	www.tutorials4wp.com.
A	mail.tutorials4wp.com.

The screenshot shows the SiteGround dashboard with the 'DNS Zone Editor' option highlighted in the left sidebar. The main content area displays the 'Create New Record' section for the domain 'tutorials4wp.com'. The 'CNAME' record type is selected. The 'Name' field is set to 'tutorials4wp.c...' and the 'TTL' is set to '24 hours'. The 'Resolves to' field is empty. Below this, the 'Manage DNS Records' section shows a table with two existing A records: 'www.tutorials4wp.com.' and 'mail.tutorials4wp.com.'.

A	mail.tutorials4wp.com.

Namecheap

The image shows two screenshots of the Namecheap website. The top screenshot displays the main dashboard with a sidebar on the left containing links to Dashboard, Expiring / Expired, Domain List, Hosting List, Private Email, SSL Certificates, and Apps. The top navigation bar includes links for Domains, Hosting, WordPress, Email, Apps, and Security, each with a 'NEW' badge. A yellow banner at the top right contains a message about PIR Registry maintenance. The main content area greets the user 'Hello Sumit Kumar' and shows the account balance as '\$0.00 Top-up'. Below this is a search bar and a section titled 'Recently Active in Your Account' which lists 'getpositivereply.com' under the 'Products' category.

The bottom screenshot is a close-up of the top navigation bar. The 'Account' link is circled in red. A dropdown menu is open, showing options: Dashboard, Expiring Soon, Domain List (which is highlighted with a red circle and a mouse cursor), Hosting List, Private Email, SSL Certificates, and Profile. Other navigation links visible include Email, Apps, Security, Transfer to Us, and Help Center.
